## RESEARCH INTERESTS

---

I am a Machine Learning Scientist and Ph.D. Candidate at the University of Amsterdam (graduating April 2027), specializing in Natural Language Processing (NLP) and Information Retrieval (IR). My research covers key aspects of agentic conversational search systems, including retrieval, LLM-based evaluation, personalization, synthetic data generation, and user simulation. I have published over 10 papers in these areas, alongside a proven track record of building production-scale NLP pipelines for Booking.com and the European Patent Office (EPO) at Leiden University. Additionally, as a co-organizer of the TREC iKAT track, I have helped publish reusable benchmarks, evaluation methodologies, and tools for information-seeking systems.

## EDUCATION

## WORK EXPERIENCE

---

|                                                                |                                    |
|----------------------------------------------------------------|------------------------------------|
| <b>Booking.com</b><br><i>Machine Learning Scientist Intern</i> | Amsterdam, The Netherlands<br>2025 |
|----------------------------------------------------------------|------------------------------------|

- Designed and deployed a domain-agnostic synthetic data generation pipeline capable of bootstrapping Machine Learning (ML) models in zero-annotation settings, eliminating reliance on human-labeled data.
- Developed novel style-diversity techniques to increase synthetic dataset variance and model generalization, leading to a paper currently under review [1].
- Built scalable generation workflows using PyTorch, Hugging Face (TRL/PEFT) to support dataset generation across multiple enterprise use cases.

|                                                                                                            |                             |
|------------------------------------------------------------------------------------------------------------|-----------------------------|
| <b>Leiden University (LIACS)</b><br><i>Researcher (In Collaboration with European Patent Office (EPO))</i> | Leiden, Netherlands<br>2022 |
|------------------------------------------------------------------------------------------------------------|-----------------------------|

- Designed an end-to-end reference extraction pipeline, including reference detection, field detection, and entity matching to link in-text references in patents to Web of Science (WoS) scientific publications.
- Curated human-annotated datasets to fine-tune and evaluate NLP models such as transformer-based language models for sequence labeling for different stages of the designed pipeline.
- Deployed the pipeline across complete patent corpora from both the European Patent Office (EPO) and USPTO, generating a large-scale mapping dataset connecting global patents to scientific literature.
- Published the full architecture and dataset in *Information Processing & Management* (2025), establishing an enterprise-grade citation-matching standard [10].

## SKILLS
